John M. Doll

DevOps Engineer | CI/CD | Cloud Infrastructure | Automation

567-356-0382 • jdollmu@gmail.com • johnmdoll.com • linkedin.com/in/johnmdoll • github.com/JohnDoll2023

DevOps Engineer with 3+ years of experience building and optimizing CI/CD infrastructure, release automation, and configuration-as-code systems. Proven track record strengthening build performance, release reliability, developer productivity, and deployment automation across large scale development environments.

Experience:

Senior Software Engineer – Central DevOps — Boynton Beach, FL
Lutron Electronics — June 2023 – Present

- Perform **Azure Kubernetes Service** (AKS) upgrades with **Helm** and **Terraform**, using risk analysis and automated smoke and regression testing to verify each upgrade in QA before prod
- Reduced development build time by **56 minutes** per run (from 2+ hours) across a job executing **~90 times daily**
- Resolved recurring build machine outages by optimizing Cloudbees disk configuration by cutting usage from **100% (build-blocking)** to a **stable ~60%** while increasing the build history visible to mobile app teams
- Achieved near **100% build machine reliability** via configuration-as-code (**Ansible, Cloudbees**), closing multiple security gaps while also improving the self-service environment all mobile devs already rely on
- Built a **multi-arch Docker** development environment (**Buildx**, **ARM64**, **AMD64)** to bridge the Mac/Windows gap for our largest dev division and to cut new hire setup time by over **99%** from ~1 week to 10 minutes
- Improved release build success rate from **51% to 84%** in two weeks through pipeline optimization
- Automated Android/iOS beta and production build and deployment workflows using **Groovy, Cloudbees, API integrations**, removing manual release steps and lowering deployment risk
- Architected a **New Relic** dashboard with 5 tabs and **~50 widgets** surfacing comprehensive build and test metrics across all mobile pipelines, giving managers the visibility to make faster, better-informed decisions
- Pioneered a dynamic parametrization method for **Cloudbees CI/CD** jobs, the first at Lutron to implement it, clearing hard-coded values and enabling self-updating, future-proof pipelines
- Serve as Campus Recruiting Manager for alma mater, organizing 20+ recruiting events reaching **1000+** students

Software Engineer Intern — Santa Clara, CA
Amazon — May 2022 – August 2022

- **Released 3 Android apps** built with Deep Java Library, an open-source **deep learning Java** framework
- **Published a 7-page technical article** on Semantic Segmentation to Towards AI
- Debugged and solved numerous issues, boosting DJL's reliability and efficiency

Software Engineer Intern — Seattle, WA
Amazon — May 2021 – August 2021

- Utilized **HTML, CSS, JavaScript, Ajax and jQuery** to construct the frontend of highly secure web app
- Created a dashboard with an extensible **API integration** pattern - new sources require just 3 more lines of code
- Designed entire architecture and UI for implementation of web-based product projected to save developers and customer service **hundreds of hours monthly** and **$1000s** in operational cost at **1000+ monthly uses**

Education:

- **University of Illinois** Urbana, IL GPA: 4.0 Master of Computer Science August 2026
- **Miami University** Oxford, OH GPA: 3.76 B.S. in Computer Science (Cum Laude) May 2023

Skills:

- **DevOps / Infrastructure**: Jenkins, Cloudbees, Kubernetes, Ansible, Docker, AWS, Azure, Artifactory
- **CI/CD & Automation**: Groovy, Bash, Python, Fastlane, API Integration, Release Automation
- **Development**: Java, Kotlin, Swift, C#, SQL, Ruby
- **Version Control & Collaboration**: Git, GitHub, GitLab, Bitbucket, Jira, Confluence
- **Security / Quality / Observability**: Fortify, SonarQube, New Relic
- **AI-Assisted Dev**: Claude Code, Sourcegraph, Amp, GitHub Copilot
